

Engineering and Science

Combined degrees of all kinds are a great way to widen your career options, and Engineering and Science is no different. One of the best things I have found, is the ability you have to choose to credit some subjects towards your Science degree if you want, allowing greater flexibility within your Engineering degree. This means you have some room for engineering in electives, rather than just having to do all core courses. You also get the chance to take a break from the maths and calculations you sometimes get swamped with on this side of the campus. Or for the boys, this might translate to – the chance, to see some pretty faces of the female variety.

Being in two years at once has an awesome benefit of some readily available tutors, and twice the friends! Make the most of the fifth year of the uni lifestyle, they're some of the best years of your life.
